

Digital ITAP: Help us learn more about COVID-19!

IRB Approved at the
Study Level
Jan 24, 2022

What is this research about?

We want to learn more about the performance of new at-home tests for COVID-19.

What does participation in this study involve?

You are asked to download the MyDataHelps app, answer some questions about yourself, and perform three types of COVID-19 tests at home over 1-2 days.

Do I have to travel anywhere to be in this study?

No, you can complete the study from home.

How long will this take?

45-60 minutes during 2 days of testing

How are the COVID-19 tests done?

You will use a swab to collect samples from the front part of your nose. Instructions on how to do the tests will be provided to you.

Will I get the test results?

Yes. You will get results from over-the-counter tests 15 minutes after taking the tests. You will receive the results of the PCR test 2-5 days after shipping it. Materials and instructions to ship the sample are provided.

What else do I get if I participate?

You will receive a \$25 gift card if you complete all parts of the study on time.

How will my test samples be used?

Your samples will help us learn more about COVID-19 home tests and may be used for future research studies about COVID-19.

What happens if I test positive for COVID-19?

You will be asked to follow up with your primary care provider or other healthcare provider.

How do I get more information and participate?

To enroll in the study, please download the MyDataHelps app and enter the code RCCZFS to see if you are eligible to join the study.

This Study is supported by the NIH Rapid Acceleration of Diagnostics (RADxSM) Initiative
